Event B

Bayes' Rule: Examples

Bayes' Rule: Examples

Let $p'_n = Pr[A_n|B]$ be the posterior probabilities.

Bayes' Rule: Examples

Let $p'_n = Pr[A_n|B]$ be the posterior probabilities.

Thus, $p'_n = p_n q_n / (p_1 q_1 + \cdots + p_N q_n)$.

Questions: Is it true that

Bayes' Rule: Examples

Let $p'_n = Pr[A_n|B]$ be the posterior probabilities.

Thus, $p'_n = p_n q_n / (p_1 q_1 + \dots + p_N q_n)$.

Questions: Is it true that

- ▶ if $q_n > q_k$, then $p'_n > p'_k$?

Bayes' Rule: Examples

Let $p'_n = Pr[A_n|B]$ be the posterior probabilities.

Thus, $p'_n = p_n q_n / (p_1 q_1 + \dots + p_N q_n)$.

Questions: Is it true that

- ▶ if $q_n > q_k$, then $p'_n > p'_k$? Not necessarily.

Bayes' Rule: Examples

Let $p'_n = Pr[A_n|B]$ be the posterior probabilities.

Thus, $p'_n = p_n q_n / (p_1 q_1 + \dots + p_N q_n)$.

Questions: Is it true that

- ▶ if $q_n > q_k$, then $p'_n > p'_k$? Not necessarily.
- ▶ if $p_n > p_k$, then $p'_n > p'_k$?

Bayes' Rule: Examples

Let $p'_n = Pr[A_n|B]$ be the posterior probabilities.

Thus, $p'_n = p_n q_n / (p_1 q_1 + \dots + p_N q_n)$.

Questions: Is it true that

- ▶ if $q_n > q_k$, then $p'_n > p'_k$? Not necessarily.
- ▶ if $p_n > p_k$, then $p'_n > p'_k$? Not necessarily.

Bayes' Rule: Examples

Let $p'_n = Pr[A_n|B]$ be the posterior probabilities.

Thus, $p'_n = p_n q_n / (p_1 q_1 + \dots + p_N q_n)$.

Questions: Is it true that

- ▶ if $q_n > q_k$, then $p'_n > p'_k$? Not necessarily.
- ▶ if $p_n > p_k$, then $p'_n > p'_k$? Not necessarily.
- ▶ if $p_n > p_k$ and $q_n > q_k$, then $p'_n > p'_k$?

Bayes' Rule: Examples

Let $p'_n = Pr[A_n|B]$ be the posterior probabilities.

Thus, $p'_n = p_n q_n / (p_1 q_1 + \dots + p_N q_n)$.

Questions: Is it true that

Review: Independence

Review: Independence

“First coin yields 1” and “Sum is 7” are independent

Review: Independence

Pairwise, but not mutually

“First coin yields 1” and “Sum is 7” are independent

Review: Independence

“First coin yields 1” and “Sum is 7” are independent

Pairwise, but not mutually

If $\{A_j, i \in J\}$ are mutually independent, then $[A_1 \cap \bar{A}_2] \Delta A_3$ and $A_4 \setminus A_5$ are independent.

Our intuitive meaning of “independent events” is mutual independence.

Review: Independence

Review: Independence

Recall

Review: Independence

Recall

- ▶ A and B are independent if $Pr[A \cap B] = Pr[A]Pr[B]$.

Review: Independence

Recall

- ▶ A and B are independent if $Pr[A \cap B] = Pr[A]Pr[B]$.
- ▶ $\{A_j, j \in J\}$ are mutually independent if
$$Pr[\bigcap_{j \in K} A_j] = \prod_{j \in K} Pr[A_j], \forall \text{ finite } K \subset J.$$

Review: Independence

Recall

- ▶ A and B are independent if $Pr[A \cap B] = Pr[A]Pr[B]$.
- ▶ $\{A_j, j \in J\}$ are mutually independent if
$$Pr[\bigcap_{j \in K} A_j] = \prod_{j \in K} Pr[A_j], \forall \text{ finite } K \subset J.$$

Thus, A, B, C, D are mutually independent if there are

- ▶ independent 2 by 2:
$$Pr[A \cap B] = Pr[A]Pr[B], \dots, Pr[C \cap D] = Pr[C]Pr[D]$$

Review: Independence

Recall

- ▶ by 3: $Pr[A \cap B \cap C] = Pr[A]Pr[B]Pr[C], \dots, Pr[B \cap C \cap D] = Pr[B]Pr[C]Pr[D]$
- ▶ by 4: $Pr[A \cap B \cap C \cap D] = Pr[A]Pr[B]Pr[C]Pr[D]$.

Independence: Question 1

Independence: Question 1

Consider the uniform probability space and the events A, B, C, D .

Independence: Question 1

Consider the uniform probability space and the events A, B, C, D .

Independence: Question 1

Consider the uniform probability space and the events A, B, C, D .

Which maximal collections of events among A, B, C, D are pairwise independent?

Independence: Question 1

Consider the uniform probability space and the events A, B, C, D .

Which maximal collections of events among A, B, C, D are pairwise independent?

$$\{A, B, C\},$$

Independence: Question 1

Consider the uniform probability space and the events A, B, C, D .

Which maximal collections of events among A, B, C, D are pairwise independent?

$\{A, B, C\}$, and $\{B, C, D\}$

Independence: Question 1

Consider the uniform probability space and the events A, B, C, D .

Which maximal collections of events among A, B, C, D are pairwise independent?

$\{A, B, C\}$, and $\{B, C, D\}$

Can you find three events among A, B, C, D that are mutually independent?

Independence: Question 1

Consider the uniform probability space and the events A, B, C, D .

Which maximal collections of events among A, B, C, D are pairwise independent?

$\{A, B, C\}$, and $\{B, C, D\}$

Can you find three events among A, B, C, D that are mutually independent?

No: We would need an outcome with probability $1/8$.

Independence: Question 2

Independence: Question 2

Let $\Omega = \{1, 2, \dots, p\}$ be a uniform probability space where p is prime.

Independence: Question 2

Let $\Omega = \{1, 2, \dots, p\}$ be a uniform probability space where p is prime.

Can you find two independent events A and B with $Pr[A], Pr[B] \in (0, 1)$?

Independence: Question 2

Let $\Omega = \{1, 2, \dots, p\}$ be a uniform probability space where p is prime.

Can you find two independent events A and B with $Pr[A], Pr[B] \in (0, 1)$?

Let $a = |A|, b = |B|, c = |A \cap B|$.

Independence: Question 2

Let $\Omega = \{1, 2, \dots, p\}$ be a uniform probability space where p is prime.

Can you find two independent events A and B with $Pr[A], Pr[B] \in (0, 1)$?

Let $a = |A|, b = |B|, c = |A \cap B|$.

Then,

$$Pr[A \cap B] = Pr[A]Pr[B],$$

Independence: Question 2

Let $\Omega = \{1, 2, \dots, p\}$ be a uniform probability space where p is prime.

Can you find two independent events A and B with $Pr[A], Pr[B] \in (0, 1)$?

Let $a = |A|, b = |B|, c = |A \cap B|$.

Then,

$$\begin{aligned} Pr[A \cap B] &= Pr[A]Pr[B], \text{ so that} \\ \frac{c}{p} &= \frac{a}{p} \times \frac{b}{p}. \end{aligned}$$

Independence: Question 2

Let $\Omega = \{1, 2, \dots, p\}$ be a uniform probability space where p is prime.

Can you find two independent events A and B with $Pr[A], Pr[B] \in (0, 1)$?

Let $a = |A|, b = |B|, c = |A \cap B|$.

Then,

$$Pr[A \cap B] = Pr[A]Pr[B], \text{ so that}$$

$$\frac{c}{p} = \frac{a}{p} \times \frac{b}{p}. \text{ Hence,}$$

$$ab = cp.$$

Independence: Question 2

Let $\Omega = \{1, 2, \dots, p\}$ be a uniform probability space where p is prime.

Can you find two independent events A and B with $Pr[A], Pr[B] \in (0, 1)$?

Let $a = |A|, b = |B|, c = |A \cap B|$.

Then,

$$Pr[A \cap B] = Pr[A]Pr[B], \text{ so that}$$

$$\frac{c}{p} = \frac{a}{p} \times \frac{b}{p}. \text{ Hence,}$$

$$ab = cp.$$

This is not possible since $a, b < p$.

Review: Collisions & Collecting

Collisions:

$$Pr[\text{no collision}] \approx e^{-m^2/2n}$$

Review: Collisions & Collecting

Collisions:

$$Pr[\text{no collision}] \approx e^{-m^2/2n}$$

Collecting:

$$Pr[\text{miss Wilson}] \approx e^{-m/n}$$

$$Pr[\text{miss at least one}] \leq ne^{-m/n}$$

$$A = \{1, 2\}, B = \{1, 3\}, C = \{1, 4\}.$$

- ▶ A, B, C pairwise independent. Is it true that $(A \cap B)$ and C are independent?

No. In example above, $Pr[A \cap B \cap C] \neq Pr[A \cap B]Pr[C]$.

- ▶ Assume $Pr[C|A] > Pr[C|B]$.

Is it true that $Pr[A|C] > Pr[B|C]$?

No.

- ▶ Deal two cards from a 52-card deck.

A mini-quiz; part 2

- ▶ $\Omega = \{1, 2, 3, 4\}$, uniform. Find events A, B, C that are pairwise independent, not mutually.

$$A = \{1, 2\}, B = \{1, 3\}, C = \{1, 4\}.$$

- ▶ A, B, C pairwise independent. Is it true that $(A \cap B)$ and C are independent?

No. In example above, $Pr[A \cap B \cap C] \neq Pr[A \cap B]Pr[C]$.

- ▶ Assume $Pr[C|A] > Pr[C|B]$.

Is it true that $Pr[A|C] > Pr[B|C]$?

No.

- ▶ Deal two cards from a 52-card deck. What is the probability that the value of the first card is strictly larger than that of the second?

$$Pr[\text{same}] = \frac{3}{51}.$$

A mini-quiz; part 2
